READY MIX CONCRETE · V.KOTA, A.P.

PROJECT DOCUMENTATION & USER GUIDE

DNK RMC Billing & Plant Management System

A complete, cloud-synced system to run a Ready Mix Concrete plant — GST invoicing, dispatch, inventory, staff payroll and tax reporting — built for the team at DNK Power Conmix.

● Live at dnk-rmc.web.app

Version **1.0**

September 2026

By **EPIX Media**

SECTION 01

Overview & access

The DNK RMC system replaces paper registers and spreadsheets with one web application that every authorised staff member can open from any device. Everything — bills, payments, stock, attendance and reports — lives in one place and stays in sync automatically.

What the system does

It handles the full cycle of a concrete plant: raise a GST-correct tax invoice for each dispatch, track who owes money, manage raw-material stock and vendor purchases, run staff attendance and salary, and hand your accountant ready-made GST reports. It works online across all your computers and phones, and keeps working even if the internet drops.

How to open it

Open any modern browser (Chrome, Edge, Safari) on a computer or phone and go to the address below. No installation needed.

ADDRESS

<https://dnk-rmc.web.app>

How it's organised

A menu on the left groups every screen into five areas so you always know where to look:

- **Operations** — dashboard, billing, outstanding
- **Plant & Staff** — stock, vendors, attendance, payroll
- **Sales Tools** — leads & calculators
- **Masters** — customers, grades, rates
- **Insights** — reports, users, settings

SECTION 02

Logging in & user roles

Each person signs in with their own username and password. What they can see and change depends on their role, so the right people get the right access.

Signing in

HOW TO USE

- 1 Open dnk-rmc.web.app — the login screen appears.
- 2 Enter your **username** (or email) and **password**, then press or click **Sign In**.
- 3 Forgot your password? Click **Forgot password?** and answer your security question to reset it.
- 4 Use the **eye icon** in the password box to check what you typed.

The three roles

ROLE	USERNAME	WHAT THEY CAN DO
Admin	admin	Full access — every module, plus user management, settings, no-code customisation and feature toggles.
Accountant	accountant	Day-to-day billing and operations. Cannot open admin-only settings.
Auditor	auditor	Read-only — can view and download everything but cannot edit or delete.

CHANGE YOUR PASSWORD FIRST

Your initial passwords were provided separately by EPIX Media. For security, sign in and change the Admin password immediately, and don't share the Admin login. Roles and passwords are managed in [Users & Permissions](#).

SECTION 03

Dashboard

The first screen after login. It gives you the day's picture at a glance so you know exactly where things stand before doing anything else.

What you see

Live figures that update as you work:

- **Today's dispatch** — total cubic metres billed today.
- **This month's sales** — running monthly revenue.
- **Outstanding** — total money still to be collected, and how many customers owe it.
- **Recent invoices** — the latest bills, click any to reprint.
- **Low-stock alerts** — materials at or below their reorder level.

Billing & invoices

The heart of the system. Raise a GST-correct tax invoice for every concrete dispatch, keep them all searchable, and track exactly who still owes money.

New Dispatch / Bill

Creates a tax invoice. GST is worked out automatically from the customer's GSTIN and state — you never calculate tax by hand.

HOW TO USE

- 1 Go to **Operations → New Dispatch / Bill**.
- 2 Pick the **Customer**. The system detects the tax type: **CGST + SGST** within Andhra Pradesh, **IGST** for other states, or **No GST** for an unregistered buyer.
- 3 Choose the **Site/Project** (optional), **Concrete Grade**, and **Vehicle & Driver**.
- 4 Enter **Quantity (Cum)** and **Rate** — the rate auto-fills if set in the Rate Master. (*For a PUMP grade these two are optional.*)
- 5 Optional: add **Pump Charges** and tick **Apply GST on pump** if they're taxable.
- 6 Check the live **Invoice Summary** on the right — taxable value, GST and grand total, plus the amount in words.
- 7 Click **Generate Invoice & PDF**. The invoice opens ready to print or save as PDF, and is stored under Invoices.

GOOD TO KNOW

Invoice numbers are assigned automatically (DNK/1, DNK/2 ...) and stay fixed for registered buyers. For unregistered buyers the number is editable if you need to match a manual book.

Invoices

Every bill you've raised, in one searchable list.

HOW TO USE

- 1 Open **Operations → Invoices** .
- 2 Filter by **search**, **customer**, or a **date range** (From / To).
- 3 Use the row actions to **edit**, **delete**, print the **Tax Invoice** or **Batch Slip**, or a customer **Statement**.
- 4 Export the whole list to Excel/CSV from the row or from Reports.

Outstanding

Track pending bills and record collections.

HOW TO USE

- 1 Open **Operations → Outstanding** .
- 2 Find the bill under **Pending Bills**.
- 3 Record a **payment** — amount, mode and date.
- 4 The balance updates instantly and the entry appears, time-stamped, under **Recent Payments**.

SECTION 05

Plant & staff

Everything behind the invoice — raw materials, vendors, vehicles, and the people who run the plant.

Product Inventory

A stock register for cement, aggregates, sand, admixtures and more.

HOW TO USE

- 1 Open [Plant & Staff → Product Inventory](#) .
- 2 Add a product with its **opening stock**, **unit** and **reorder level**.
- 3 Recording a vendor **purchase** adds stock automatically; use **Stock Out** for usage.
- 4 Items at or below reorder show a red **LOW** tag and a dashboard alert.

Vendors & Purchases

Supplier records and every purchase you make.

HOW TO USE

- 1 Open [Plant & Staff → Vendors & Purchases](#) .
- 2 Add a vendor (name, GSTIN, phone).
- 3 Record a purchase and link it to a product to top up stock.
- 4 Filter purchases by date range and export.

Materials Received

An inward log of materials arriving at the plant.

HOW TO USE

- 1 Open [Plant & Staff → Materials Received](#) .
- 2 Add an entry — date, material type, quantity, note.
- 3 Print or export the summary when needed.

Vehicle Log

Track running and fuel for each transit mixer / tipper.

HOW TO USE

- 1 Open **Plant & Staff → Vehicle Log** .
- 2 Enter the opening and closing meter readings and fuel.
- 3 Distance is calculated for you; export any time.

Staff Attendance & Payroll

Mark daily attendance and let the system work out salary from it.

HOW TO USE

- 1 Open **Plant & Staff → Staff Attendance** . For each person mark **P** (present), **A** (absent), **H** (half-day) or **L** (leave) — or use **Mark All Present**. Future dates and pre-joining dates are blocked automatically.
- 2 Open **Salary / Payroll** . Pay is calculated from attendance: **Absent = unpaid**, and **Leave = paid** up to the monthly allowance (only extra leave becomes loss-of-pay).
- 3 Record **advances** — you're warned if an advance exceeds the salary due.
- 4 Print a **payslip** for any employee.

SECTION 06

Sales tools

Helpers for winning and quoting work.

Leads & Follow-up

A simple pipeline for enquiries.

HOW TO USE

- 1 Open [Sales Tools](#) → [Leads & Follow-up](#) .
- 2 Add a lead with its stage (New → Contacted → Quoted → Won / Lost) and next follow-up date.
- 3 Track pipeline value and what to chase next.

Concrete & Revenue Calculators

Quick on-the-spot estimates.

HOW TO USE

- 1 **Concrete Calculator** — enter a volume to estimate the material needed.
- 2 **Revenue Calculator** — check costing and margin before quoting a rate.

SECTION 07

Master data

Set these up once and the rest of the system fills itself in. Anything you enter here appears in the dropdowns on the billing screens.

The five masters

- **Customers** — name, GSTIN (validated), state and address. Drives automatic GST.
- **Sites / Projects** — delivery sites linked to customers.
- **Vehicles & Drivers** — transit mixers, tippers and drivers.
- **Concrete Grades** — M10, M20, M25 ... each with its HSN/SAC and mix design.
- **Rate Master** — the agreed rate per customer × grade, so bills price themselves.

HOW TO USE

- 1 Open the item under **Masters**.
- 2 Click **Add**, fill the form, and save. GSTIN and phone numbers are checked for you.
- 3 Edit or remove any record from its row.

SECTION 08

Reports & GST

Turn your data into the files your accountant and tax filing need — in the exact formats they expect.

Reports & Export

All exports live in one place under [Insights → Reports & Export](#) .

WHAT YOU CAN DOWNLOAD

- **All Invoices (Excel/CSV)** — with separate CGST, SGST and IGST columns, so it works for both intra- and inter-state tax.
- **Monthly Summary** — bills, quantity, taxable, GST and total per month.
- **GSTR Sales Register (Tally)** — pick a month; downloads in Tally's exact layout (D-Mon-YY dates, Dr/Cr, Grand Total) so your accountant can use it directly.
- **Toll / Dispatch Register** and **Bulk Invoice ZIP** for a whole customer or period.

HOW TO EXPORT THE GST REGISTER

- 1 Open [Reports & Export](#) .
- 2 Choose the **month** next to *GST Register*.
- 3 Click **GSTR Sales Register (Tally)** — the file downloads ready to hand over.

SECTION 09

Admin & no-code setup

The Admin can shape the system without any programming — add options, turn modules on or off, manage users, import history and back everything up. All of this lives in

[Settings & Backup](#) and [Users & Permissions](#) .

Manage Lists & Options — no coding

Change the choices that appear in dropdowns across the app yourself. Great when you add a new material or a new lead stage.

HOW TO USE

- 1 Open [Settings](#) → [Manage Lists & Options](#) .
- 2 Pick a list — Dispatched Through, Product Categories, Units, Material Types or Lead Stages.
- 3 **Add, rename or remove** options; **Reset to default** restores the originals.
- 4 Changes apply instantly and sync to every device. Existing records keep their saved value even if you later remove an option.

Feature Management

Show or hide whole modules for everyone.

HOW TO USE

- 1 Open [Settings](#) → [Feature Management](#) .
- 2 Toggle any module on or off — it appears or disappears from every user's menu at once (core screens stay on).

Users & Permissions

Create logins and decide exactly what each can touch.

HOW TO USE

- 1 Open [Insights](#) → [Users & Permissions](#) .
- 2 Add a user, choose a role, and tick the modules they may use.
- 3 Disable a login any time without deleting its history.

Import your history (April 2026 onward)

Bring older records in from a spreadsheet instead of retyping them.

HOW TO USE

- 1 Open **Settings → Import Data**.
- 2 Choose a module — Invoices/Sales, Materials, Vehicle Log, Customers, Vendors, Staff or Products.
- 3 Click **Download Template**, fill it in, and save as **CSV or Excel (.xlsx)**.
- 4 Choose your file and click **Import**. Customers, vendors, grades and vehicles are created for you, GST on invoices is calculated automatically, and duplicates are skipped.

TIP

CSV files import fully offline; Excel (.xlsx) import needs an internet connection at the moment you import.

Backup & company details

HOW TO USE

- 1 Open **Settings & Backup**.
- 2 Edit **Company Details** (name, GSTIN, address, bank) — these print on every invoice.
- 3 Click **Download Backup (.json)** to save a full copy; **Restore** brings it back on any computer.

RECOMMENDED

Download a backup weekly and keep it somewhere safe, in addition to the automatic cloud sync.

SECTION 10

Sync, security & mobile

The system is built to be safe, always up to date, and usable from the plant on a phone.

Real-time cloud sync

Log in on two computers and both stay in step — a bill raised on one appears on the other within seconds. A small badge shows **Synced**, **Connecting** or **Local only**. If the internet drops, the app keeps working and syncs again when it returns.

Security

Sign-in required, role-based access, validated GST and phone entries, and hardening against malicious data and scripts (Content-Security-Policy and input escaping). Invoices print clean on A4 with no browser clutter.

Mobile ready

On a phone the menu becomes a slide-in drawer (tap ☰), wide tables scroll neatly, and forms stack to one column — so you can raise a bill or check outstanding from the site.

Fast & lightweight

The whole app is a single lightweight page that loads quickly and puts almost no load on the server, so it stays responsive even on modest connections.

SECTION 11

Quick how-to recipes

The everyday jobs, boiled down to the shortest path.

I WANT TO...	DO THIS
Raise a concrete bill	New Dispatch / Bill → pick customer, grade, vehicle → qty & rate → Generate Invoice & PDF
Record a payment received	Outstanding → find the bill → record amount, mode, date
Re-print an old invoice	Invoices → search → Tax Invoice / Batch Slip
Give my accountant GST data	Reports & Export → choose month → GSTR Sales Register (Tally)
Add a new material or lead stage	Settings → Manage Lists & Options → Add
Import old bills from Excel	Settings → Import Data → download template → fill → Import
Mark attendance & run salary	Staff Attendance → mark P/A/H/L → Salary / Payroll
Add a staff login	Users & Permissions → Add user → pick role & permissions
Back up everything	Settings & Backup → Download Backup (.json)
